

Amani Fadli Dokkali

Game Developer

Ketering, UK · amani.fad12@gmail.com · +44 7425594832 · LinkedIn: Amani Fadli Dokkali · Portfolio: <https://amani-fadli.vercel.app/> · GitHub: <https://github.com/AmaniFadli>

Creative and motivated junior game developer with a strong foundation in cross-platform application development, specialized in video games and digital entertainment. Award-winning creator of Hollywood Nightmare (Dona TIC 2024) and winner of FX Barcelona Film School Game Jam 2024. Experienced in Unity, VR simulation, and game design with a passion for storytelling, diversity, and innovation. Currently working remotely on an interactive VR drone simulator. Interested in game development and cybersecurity, with a dream of creating impactful shooter games that resonate with players worldwide.

WORK EXPERIENCE

Unity Junior Programmer, Drone Simulator

02/2024 – Present

Aerofor, Girona, Spain

- Interactive Simulator (PC/VR) → Developed a physics-based simulator with optimized 3D environments, intuitive VR/PC controls, modular training systems, and real-time feedback.
- Level Design → Built scalable, performance-optimized levels with interactive elements and progressive difficulty for immersive training scenarios.
- User System → Implemented secure user profiles with data tracking, customization settings, and integrated social features.

EDUCATION

HNC in Development of Multiplatform Apps & Videogames (DAM-VI)

2022–2024

Institut Pedralbes, Barcelona Spain

Studied game design and development, focusing on programming, databases, and game engines (Unity/Unreal Engine) to create 2D/3D environments, gameplay mechanics, and AI. Gained experience in web and mobile app development, culminating in a final project (fully developed game or app) and internships in the tech industry.

Spanish Baccalaureate in Technology

2020–2022

Institut Isaac Albeniz, Badalona, Spain

Research Project: “Jupiter: An Impossible Star”, based on the study of the formation, composition and impact of Jupiter on the Solar System and the potential of a binary system by programming a simulation.
